OVERALL RESPONSIBILITIES:

As a Client Services Test Engineer at Visual IQ.

- Data Integrity analysis to find out any results which are out of sync, which may harm the results readout and delivery.
- Data Analysis to provide solutions and recommendations to the Business Team and implement system changes.
- Exhaustive QA on raw data to ensure clean and structured data for processing and setting up automated environment for execution of test cases as part data refresh process.
- Implementation of custom solutions and test cases and configuring of product modules as part of change requests.
- Scripting for automating data trend reports and alerts and engaged with clients and understanding their business and domain. Worked with clients like Apollo, Kia, Now TV, Sky, PayPal etc.

As a Product Test Engineer at Visual IQ.

PROJECT #1:

Title : Audience IQ

Data Base : SQL Server

Role : Test Engineer

Description: Audience IQ integrates with Data Management Platform (DMP) to provide insight into the specific audiences and respective media tactics that will be the most effective in exceeding your marketing goals. Specifically, Visual IQ integrates Lotame's (the world's leading independent data management platform (DMP) and data exchange) robust audience attributes into its marketing intelligence platform, making audience data a core feature of the platform for all clients.

Responsibilities:

- Configuration, maintenance and management of testing environments
- Planning and Scheduling the preparation of the Test Plan
- Preparing the Test Execution Schedule
- Test Execution and capturing of Test Results
- Defect Logging and re-testing
- Debugging of Issues - Work closely with the development team to investigate test failures and issues
- Inputting to test meetings and signing off reports (Test Workshops/ Status Updates/ Test Reviews)

PROJECT #2:

Title : Self Service

Data Base : SQL Server, Nifi data ingestion

Role : Test Engineer

Description: Self Service application includes Setting up Client Configuration, Data Sources and Data Centres, Pixel Manager and Site Tag Manager. Client Configuration ensures setting up of a Client based on the channels, Sub Channels, Time Zones, Pixel Types etc.; Data Sources ensures to configure source for your data; Pixel manager ensures the touchpoint pixel creation for clients based on the channels; Site Tag Manager ensures the client has all the relevant tags that to be used in their sites, so that digital marketing can be easily tracked. Instead of Lotame, we use eXelate who aggregates and distributes third-party online data, composed of premium demographic, interest, and intent data from over 200 online and offline data providers.

Responsibilities:

- Maintain the test plan against project goals
- Ensure the requirements can be tested and thus not ambiguous
- Raise visibility of software/product/service readiness by showing the number of bugs against work completed
- Participate in the design process and in the estimation of stories and support the live system
- Take ownership of testing work packages/stories and follow through to completion
- Strong at tracking changes and reconciling back to test runs
- Strong knowledge of testing User interface across many devices and be able to feedback when the User Experience does not work
- Good self-confidence and ability to communicate/present issues and challenge requirements
- Good diplomatic skills in negotiating positive quality outcomes
